

UNITED STATES DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
NATIONAL MARINE FISHERIES SERVICE
Silver Spring, MD 20910

MAR 15 2012

Mr. Virgil Moore
Director
Idaho Department of Fish and Game
P.O. Box 25
Boise, Idaho 83707

Dear Mr. Moore:

I approve, with specific conditions, your August 8, 2011, request for lethal removal authority (Letter of Authorization, LOA) to minimize California sea lion predation on threatened and endangered salmonids in the Columbia River. NOAA Fisheries has conducted a thorough analysis in accordance with Section 120 of the Marine Mammal Protection Act (MMPA), and has determined that certain individually identifiable California sea lions are having a significant negative impact on the decline or recovery of several stocks of salmon and steelhead listed under the Endangered Species Act (ESA).

By way of background, NOAA Fisheries partially approved your December 2006 request for lethal removal authority in 2008 and issued letters of authorization to lethally remove individually identifiable predatory California sea lions at Bonneville Dam. Shortly thereafter, the Humane Society of the United States filed a lawsuit claiming that NOAA Fisheries' decision to authorize the lethal removal of California sea lions violated the MMPA and National Environmental Policy Act (NEPA). NOAA Fisheries succeeded in the district court, but the Ninth Circuit vacated and remanded the agency's MMPA Section 120 lethal removal authorization on November 2010 (but the court upheld NOAA Fisheries' NEPA analysis). In response to your August, 2011 request, and after considering public comments and the Pinniped Fisheries Interaction Task Force's recommendations on your request, NOAA Fisheries has once again made the requisite findings under the MMPA.

As was the case in your 2008 LOA, lethal removal is authorized only if Idaho Department of Fish and Game, Oregon Department of Fish and Wildlife, and Washington Department of Fish and Wildlife (States) are in compliance with the following terms and conditions. Please read these conditions carefully as several of the terms and conditions have been modified since your 2008 authorization.

Terms and Conditions

- 1) Beginning on March 20, 2012, the States may lethally remove wherever found (except for breeding rookeries) individually identifiable predatory California sea lions that are having a significant negative impact on ESA-listed salmonids. NOAA Fisheries

1

considers such animals to be individually identifiable predatory California sea lions that are having a significant negative impact on ESA-listed salmonids if they display natural or applied features that allow them to be individually distinguished from other California sea lions and:

- a) have been observed eating salmonids at Bonneville Dam, in the “observation area” below the dam, in the fish ladders, or above the dam, between January 1 and May 31 of any year;
 - b) have been observed at Bonneville Dam on a total of any 5 days (consecutive days, days within a single season, or days over multiple years) between January 1 and May 31 of any year; and
 - c) are sighted at Bonneville Dam after they have been subjected to active non-lethal deterrence.
- 2) The California sea lions currently identified as meeting the description in paragraph 1 are included in the Appendix. In consultation with the States, the NOAA Fisheries Northwest Regional Administrator may periodically amend the Appendix to accurately report those individuals that meet the description in paragraph 1 and thus are authorized for removal. Such amendments shall be in writing.
 - 3) The States may not remove more than 1 percent of the potential biological removal level (PBR) annually. The current PBR for this population of California sea lions is 9,200. NOAA Fisheries periodically revises the PBR of California sea lions as new information becomes available. Any revised PBR calculations would be reported in annual marine mammal stock assessment reports and be provided to the States by NOAA Fisheries.
 - 4) The States shall appoint an Institutional Animal Care and Use Committee (IACUC) composed of a veterinarian, marine mammal biologists and a non-affiliated member who will represent the community, to advise States on protocols for capture, holding and euthanasia of individually identifiable predatory California sea lions.
 - 5) The States, in consultation with NOAA Fisheries, will assume the lead role for the capture of predatory sea lions. The States may euthanize individually identifiable predatory sea lions that are captured in a trap immediately. However, should NOAA Fisheries notify the States that a pre-approved permanent holding facility (research, zoo, aquarium) is willing to accept the animal(s), the States shall maintain the animal in a temporary holding facility approved by the IACUC for up to 48 hours. If the pre-approved research, zoo, or aquarium facility (or their designee) does not collect an animal within 48 hours of its capture, the States may euthanize it. The method of euthanizing captured predatory sea lions must be approved by the IACUC.
 - 6) Free-ranging individually identifiable predatory California sea lions may be shot by a qualified marksman shooting from land, the dam, or other shoreline structures, so long as the identified sea lion is: (1) hauled out on shore or on the concrete apron along the north side of Cascade Island; (2) hauled out on the flow deflectors along the base of the Bonneville Dam spillway; or (3) in the water so long as it is no greater than 50 feet

from shore or apron on the north side of Cascade Island or from the dam at powerhouses one and two. The firearms for shooting at distances greater than 25 yards shall include a high-powered rifle (.240 caliber or above). For shooting at distances less than 25 yards a high-powered rifle or, a 12-gauge or above shotgun loaded with slugs or 00 buckshot, may be used. Ammunition shall not contain lead.

- 7) The States shall make all reasonable efforts to retrieve carcasses of animals that have been shot. The States shall monitor nearby downstream areas for stranded animals that have been shot but not retrieved immediately.
- 8) Safety and security during lethal removal activities shall be provided by the States of Oregon and Washington in coordination with the Columbia Basin Law Enforcement Council, and the Corps of Engineers, Portland District. The States shall establish an Incident Command Center (ICC) during lethal removal activities. The ICC shall direct safety and security and provide a media interface. The ICC shall coordinate security and safety activities with the Corps of Engineers, the Coast Guard, and other agencies as necessary.
- 9) The States shall notify the Corps of Engineers, Portland District, and the Project Manager at Bonneville Locks and Dam, prior to lethal removal operations. The ICC shall consult with the Corps regarding road closures or changes to visitation on Corps of Engineers property/dam facilities.
- 10) The States shall ensure that the transfer or disposal of any carcass, tissue, or parts is in accordance with applicable law. At NMFS' request and to the extent practicable the States shall make the carcasses, or tissues from them, of sea lions killed pursuant to this authorization available for use in scientific research or for educational purposes.
- 11) The States shall report any permanent removals of predatory sea lions (either transferred to permanent captivity or euthanized) to the Regional Administrator, NOAA Fisheries, Northwest Region, within 3 days following removal.
- 12) The States shall develop and implement a monitoring plan to evaluate 1) the impacts of predation, 2) the effectiveness of non-lethal deterrence, and 3) the effectiveness of permanent removal of individually identifiable predatory sea lions as a method to reduce adult salmonid mortality. To the extent practicable the States shall use data collected by the Corps of Engineers or other agencies to help fulfill the monitoring requirement, avoid duplication of effort, and ensure data consistency across programs.
- 13) The States shall submit annual monitoring reports to the Regional Administrator, NOAA Fisheries, Northwest Region, on or before November 1. The annual reports shall include a summary of actions taken to reduce predation (non-lethal and lethal), the States' compliance with the terms and conditions of this authorization, and plans for future actions in compliance with this authorization.

- 14) The States shall periodically review observation data collected by the Corps' Fisheries Field Unit to determine if additional individually identifiable California sea lions qualify as predatory (as defined in paragraph 1) and notify the NOAA Fisheries' Northwest Regional Administrator if so. NOAA Fisheries may amend the Appendix, as described in paragraph 2.
- 15) This authorization may be modified, suspended, or revoked by NOAA Fisheries at any time with 72 hours' notice to the States.
- 16) This authorization is valid until June 30, 2016, at which time it may be extended by NOAA Fisheries for an additional period to be determined by NOAA Fisheries.

NOAA Fisheries requests that the States continue to cooperate to the maximum extent practicable in the pursuit of alternative technologies or methods to both reduce California sea lion predation on salmonids and the number of permanent removals of sea lions. Additionally, if resources are available, the States are encouraged to monitor pinniped impacts on salmonids elsewhere in the lower Columbia River.

I look forward to continuing to work cooperatively with the States on implementing measures needed to protect salmonids from sea lion predation at Bonneville Dam. Please contact Garth Griffin, NOAA Fisheries Northwest Region, Protected Resources Division, at 503 231-2005 if you have any questions about this authorization.

Sincerely,

James H. Lecky
Director, Office of Protected Resources

Attachment (1)

Appendix 1, "Predatory California Sea Lions Authorized For Immediate Removal" was originally compiled by the National Marine Fisheries Service as informed by R. Stansell, Appendix D, Table 3.3 of the Final Report and Recommendations of the Pinniped-Fishery Interaction Task Force: Columbia River (November 5, 2007). The Appendix was originally transmitted to the States of Oregon, Washington, and Idaho in a Letter of Authorization issued March 17, 2008. The Appendix has been periodically amended to report those individual California sea lions that meet the description contained in the Letter of Authorizations and are thus authorized for removal.

Serial Number = A tally of the sea lions authorized for removal.

Appendix Date = The issuance date of the Appendix 1 list that first included this animal.

Appendix Id. = The unique alpha-numeric brand number or identification code assigned to this animal when cataloged.

aka = Other known identification codes or brands applicable to this animal.

Brand Date = The date a unique alpha-numeric brand was applied to this animal.

Removal Date = The date the animal was permanently removed (killed, transferred to captivity, found dead).

Note: The original Appendix 1 list issued on March 17, 2008 included two sea lions (C579 and B216). A review of identification data, following the removal of C579 on April 1, 2009, revealed that C579 and B216 was the same animal and therefore B216 has been moved to the "aka" adjacent to C579 in order to maintain a correct tally of animals authorized for removal. Similarly, additional review of observation records showed that sea lions B47 and B221 from the original list are the same animal. Accordingly, B221 has been moved to the "aka" adjacent to B47 to maintain a correct tally of animals authorized for removal.
